How to reset geeeni camera

To do factory reset in Geeni camera settings or to reset the camera, hold the reset button for 5 seconds. Once it's reset, camera will provide a voice prompt. AR-7 You may want to factory reset the camera to: - Put the camera back to its default factory settings - Troubleshoot when the camera is not working properly To perform a factory reset of your camera: If your camera has a button This camera can be quite tricky to reset, please try some button tricks provided below to attempt to reset it. You can repeat the button tricks in order to get the camera into setup mode before proceeding with setup. Hold button for 20 seconds Wait 2 minutes for light to alternate amber/green If after 2 minutes the lights don't alternate, press button one quick time and immediately let off This will generally get the camera into setup mode. You may have to try that a few times.Once it is in setup mode you want to log off your app. Do not log in for this process, it allows you to choose "existing account" at the end of setup.Now you want to go to the settings of your phone and go to your WiFi lists. ×Sorry to interruptCSS Error © 2000-2021 Home Depot Product Authority, LLC. I'm kind of techy so setting up the app and the cameras was not a problem for me. 720p is very clear, you can hear clearly and you don't have to pay a monthly subscription like other systems.Helpful?I got 2 of these and 2 of the 1080p version. I wanted to have something I could put inside to monitor my dogs when I'm away but also something I could place in other areas of my home for more security. I love that they have 2 way audio and that they're small and discreet. They're so easy to set up AND you can view multiple cameras at once! Definitely worth it! I will buy more in the future!Helpful?Great little camera. Motion detect is fantastic. Hooked up to the geeeni app smoothly. No monthly subscription required. Can use sd card to save video or if you want cloud service its like \$2 a month. When motion is detected it takes a screen shot and saves it to the app and from there you can save to the phone. There is no charge for for the snapshots taken by motion detection. I have this in a window (glass only no screen) inside my apartment pointed out on to my back porch and I get perfectly clear images and live stream. And its so small and sleek its barely noticable. I am going to get more for the rest of the house.Helpful?I wasn't expecting much from this camera but I need to see who is checking my mailbox and this is great . great picture and you can zoom in and out . night mode is pretty clear . and motion alerts are accurate. I will be buying more for different areas but buy this camera before you buy one the expensive ones that will do the same thing.Helpful?July 15, 2020Review of Merkurs Innovations Smart Wi-Fi camera 720 p.This camera is about 4.5 inches high.IMPORTANT: This is required to be plugged into an outlet for power. The power cord reaches about 3.5 feet. This has a "flexible stem" so that when you mount the base of it, you can bend the actual camera part whatever angle you need it to be. (This comes with a 3M mounting adhesive.)It was very easy to download the app and get this camera up and running in just a few steps. So I will give it five stars for the ease-of-use feature alone. The video quality on this is clear. On the video screen it has an indicator of signal strength (i.e. 98% or whatever). This automatically detected the correct date and time/time zone upon setup, without me having to set it up myself. So the timestamp on the video is correct.This will hold a microSD chip. I have included a picture of FAQs from the instruction manual that gives a detailed explanation of memory card use versus using his camera without an extra memory card (not included).This does have night vision feature. The video quality at night is as good as the day quality. Please note that the blue indicator light on this camera stays on all the time. At night a red indicator light also comes on. (Edit: You can turn off the blue indicator light by going under the "basic feature settings". The only way to turn off the red indicator light for night vision is to turn the night vision feature itself off, which of course would mean you will not be able to see anything in the dark.)This has the option to turn "motion alert" on or off. If you turn this feature on, and motion is detected by the camera, you get a notification sent to your home.It is great to be able to access a home security camera live from my smartphone anywhere anytime. The description also says that you can have a two-way conversation over the camera, but I have not had a chance to try out that feature yet.I am pleased with this product.Helpful?July 4, 2020I Love this camera. It was so easy to set up, took all of 5 min. It's compatible with Alexa and Google Assistant. The video quality is great and you can mount it and the neck is bendable. It is not cordless and it cannot zoom or pan. However for the price it's pretty awesome! Connection is quick and there's also motion detection, night vision, 2 way audio and option to add a card to download footage. I'm definitely buying another one.Helpful?July 14, 2020Wifi Camera love the way it works. It was hard at first to get it to uplink to the app. It didn't what to take the sum card for a few days then I reset it for the uplink that worked so I went a few days without a sums card then reset it again and put in a diff sum card. It has a nice crisp picture on SD and HD both. Had night vision and great sound on the app. Now the person that was listening through the camera said it was had to hear at first. When talking on the app you have to hold down the talk bottom till the min pic is fill before you can talk, I wasn't doing that. On the app you can rec and take pic of whatever is on the screen you can also playback as long as you have a sums card on it. You can add more than just one camera to the app. I would definitely recommend it if you're looking to have little extra security or just need to see what is going on at home. You can also make it bend to put it on the wall or to make it aim where you need it.Helpful?July 8, 2020I absolutely love this Merkurs Innovations Smart WiFi 720P Camera with Voice Control, it was super easy to set up and the quality of the image and video is very good. The motion sensor works great and the image is not delayed. I put this camera on my kitchen window and the image is very clear day or night, I get a pretty good angle of my street view. I love the voice control and all the settings in the Geenie App. Make sure you install an SD card inside the camera, highly recommend this great camera!Helpful?July 4, 2020I've been wanting a camera for my yard for a while. This camera is everything those expensive ones are at a fraction of the cost. It works great during the day. However I have it behind a window screen so it's not very clear behind the screen. Wish it was suitable for outdoor use. Would love a longer cord but an extension cord works just as well. I recommend this camera to anyone needing to keep an eye on things.Helpful?July 9, 2020I gave four stars because this was a little hard to set up at first I had to move it into different rooms to see where we could put it but once we got it to load and configure it was perfect the picture is actually pretty good sound is good we are able to see clearly we do have this in our bedroom so I didn't post a picture of that part but it does work really well we also have a ring doorbell and I would say this is just as good for the price range if you want something a little more clear with the camera then maybe find something else but for this price range this camera is perfect for indoors I'm actually really impressed with this camera so if you're a beginner or you have a small budget this is definitely the camera for you I like being able to check on my dog when I'm not home and this also gives good motion detection so that's really nice and you can share this with your family and add them to your account so to me hands down great camera!Helpful? Why my camera said "pairing successfully", but the blue light keeps flashing? The blinking blue light indicates that your camera has already acquired the router information, but the network is poor. You can try as following:1. Reboot your router.2. Check whether the router your camera connected can work normally.Learn more >> How to set up the Wi-Fi network?3. Remove the micro SD card, try to reconnect power cord.4. Try to change to another USB wire (problem could be caused by power cord or power voltage).5. Place the camera close to the router as much as possible.6. If you still have problems , please contact support@weareyi.comLearn more >> What is the meaning of different colors of status light?
