Chapter 35 dental handpieces and accessories short answers.

removal of decay removal of old or faulty restorations reduction of crown portion of tooth for crown or bridge preparation preparing retention grooves for new restorations finishing and polishing restorations sectioning teeth during surgery to protect against pulp damage what is the high speed handpiece designed with? removes decay establishes retentive grooveswhat design of a bur is 33 and 1/2?what procedures are burs used for in restorative procedures? it's the cutting, polishing, and finishing portion of the burwhat type of shank fits into the contra-angle attachment? on a long belt running over a series of pulleys what two designs are the low speed hand pieces made into? initial entry to the tooth extends preparation retention removes decaywhat is an inverted cone bur used for? the head, neck, and shankwhat does the neck on a bur do? what kind of bur attachment does the high speed handpiece use? what are the pros and cons of the laser handpiece? preparing the tooth excavating decay finishing cavity walls finishing restoration surfaces removing old fillings finishing crown preparations separating crowns and bridges adjusting/correcting acrylic temporary crowns how does the diamond bur shorten preparation time and increase productivity? the contra-angle attachment holds which type of instruments? what is the air abrasion handpiece used for? initial entry to the tooth structure creates a shoulder for the margin of a crown preparationwhat is the pear bur used for? on the high speed handpiece what helps illuminate the working field? helpz in forming the internal walls of the preparation what is the end cutting bur used for? helps in forming the internal walls of the preparation what is a straight fissure cross cut bur used for? "RFCPR"removal of soft decay finishing and polishing restorations coronal polishing and removing stains porcelain adjustments root canal treatment in the laboratory what is the low speed handpiece used for? sealants external stain removal class I - IV preparations endodontic access crown margins preparation of tooth surfaces for cementation of cast restorationshow fast does the laboratory handpiece operate? 450,000 rpm (book) 500,000 rpm (notes)what is the high speed handpiece used for? takes longer than other methods which handpiece resembles a small version of the sand blaster? it's the narrow portion that connects the shank to the head what does the head of the bur do? how fast does the laboratory handpiece operate? which handpiece resembles a small version of the sand blaster? what is the ultrasonic handpiece primarily used for? trimming and contouring temporary crowns trimming and relining of partials and dentures trimming and contouring or orthodontic applianceswhat procedures is the straight attachment most commonly used for? initial entry to the tooth structure extends preparationwhat is the end cutting bur used for? removes decay establishes retentive grooveswhat is a straight fissure cross cut bur used for? what are the 3 parts of a rotary instrument? what type of procedures is the high speed handpiece used forall restorative procedures and oral surgery does then high speed handpiece have any attachments? what is an inverted cone bur used for? pros: painless therefore does not require anesthesia cons: cannot be used on teeth with restorations already in place. latch-type rotary instruments endodontic files prophylaxis cups mandrels the rotary instrument (bur) can be positioned to operate in what directions? initial entry to the tooth structure creates a shoulder for the margin of a crown preparation The first dental hand piece was operated how? forward and backward movements in the clinic what is the low speed handpiece used for? takes longer than other methods what are the pros and cons of the laser handpiece? which handpiece uses a beam of laser light to cauterize soft tissue or vaporize decayed tooth structure? due to its cutting ability what are the most frequent selected diamond burs? what handpiece uses mechanical radiant energy of water and sound vibrations to create a pulsating effect on the teeth? laboratory procedures to trim prostheses made outside the mouth (lab use and extra oral use)the contra-angle slides directly into which handpiece? how fast does the high speed handpiece operate? "RFFW"round - to provide access to the pulp chamber flat end taper - to reduce tooth structure during crown preparation flame - to reduce tooth structure in preparation for a crown wheel - to make subgingival bevels in a crown preparationwhat is a round bur used for? latch-type rotary instruments endodontic files prophylaxis cups mandrels what handpiece uses mechanical radiant energy of water and sound vibrations to create a pulsating effect on the teeth? a twisting or turning force what type of shank fits into the contra-angle attachment? standard - used for operative procedures and in the laboratory "shorty" - used for prophylaxis the contra-angle attachment holds which type of instruments?
