5.3.1.3 packet tracer spreadsheet

skips the content of ccna routing and switching: introduction to networks 6.0 à packet tracer à 5.3.1.3 packet tracer à identifies mac and ip addresses cisco à 147; ccna routing e.;; sorgente; address source, while working in the field of technology for years, I always have a live one. If you can see it, you can manage it. These images show that I have always put it into practice à 160; on each work site. This is a network I designed for a small company that allows future growth. when I sit to design a network, oo cisco packet tracer. This allows me to set VLANâs and ip subnet and test are that all my ip addresses are talking to each other. Once I have set everything up and working I can copy my configuration files and tftp them to the real hardware. À 160; the first thing I had to do about this project was to determine where each of these threads went. once I knew what they were connected I had to map the VLANâs; I want the devices on the other side to be connected to. The easiest way to do this is to change the wires one at a time. this provides two solutions to the problem. First I kept clients connected to the network until I was ready to transfer them to the new switches. and second, it allowed me to create a better cable management job at the end of the project. as you can see at the end of the project I had a much cleaner and more manageable rack. I also recommend to create a spreadsheet with all your à 160; port number and where each one of them goes. this will eventually help if you receive a call from a user who declares that something does not work properly. if you know the door where they are inserted you can easily194; 160ssh in the button and change vian to the correct network. I knew it would be a job all day. First, the rack had to be disassembled and then the appropriate size patch cables had to be ordered. Once removed all unused plaster cables I was able to really dig and clean this rack. I think the problem of networking is that it is a living breathing. what I mean is that sometimes it grows from necessity and if we donâ.t manage while we go, it will escape from hand. design and implement à 160; a new idf is my passion. engineeringâ the perfect place in the business to install a new idf davanzale is the first step towards a successful network layout. even when it is new it is easy to get right. color coding is very important for all those who can be in contact with a rack now and in the future. we also have documentation for backup of all the switches we install. I also assured myself to have the documentation of every exchange port and what it controls. remember if you can't see it yourself194; can't handle it. this could be another whole day session, but at thelt's worth it. I always have the impression that no work is too small or large that should be done well. Building a new network can be made in many ways. I like to start with a well thoughtful plan. Use Cisco Packet Tracer foracross the network, from switch cores to endpoints. I also like to create a road map for all my VLANs. When you map the network and configure the VLANs and IP subnets you can see the connectivity. This also allows me to make sure my subnets can communicate with each other. This is a network that I designed for a small business that will allow future growth. The devices are already configured. You will collect PDU information in simulation mode and answer a number of questions about the data collected. Note: Review the questions for reflection in Part 2 before proceeding with Part 1. It will give you an idea of the types of information you will need to collect. A. Click 172.16.31.2 and open the Command Prompt. b. Enter the ping command 10.10.10.3. c. Switch to simulation mode and repeat ping 10.10.10.3. A PDU appears next to 172.16.31.2. d. Click on the PDU and annotate the following information from the Outbound PDU Layer tab: ÀcÀc Destination MAC Address: 00D0:BA8E:741Ae Origin MAC Address: 000C:85CC:1DA7e Origin IP Address: 172.16.31.2e Destination IP Address: 10.10.3 ÀcÀc To the Device: Computer e. Click Capture/Forward to move the PDU to the next device. Collect the same information from Step 1d. Repeat this process until the PDU reaches its destination. Record the PDU information collected in a spreadsheet using a format such as the table shown below: Example Spreadsheet Format Device Test Dest. MAC Src MAC Src IPv4 IPv4 Destination Ping 172.16.31.2 to 10.10.3172.16.31.2 00D0:BA8E:741A 000C:85CC:1DA7 172.16.31.2 10.10.10.3 Hub Switch 1 00D0:BA8E:741 A 000C:85CC:1DA7 Router 0060:4706:572B 00D0:588C:2401 172.16.31.2 10.10.3 Switch 0 0060:4706:572B 00D0:588C:2401 Access point 10.10.10.3 0060:4706:572B 00D0:588C:2401 172.16.31.2 10.10.3 R Repeat the process in Step 1 and gather information for the following tests: Ping 10.10.10.2 from 10.10.10.3. Ping 172.16.31.2 from 10.10.10.3. Ping by 172.16.31.5. Ping 172.16.31.4 from 10.10.2.
