It has a high base damage with great critter and good condition, although the chance of high status is a bit limited by its low rof. Recommended configuration: Recommended: vs Grineer, Corrupted, Radiation vs Armored Body, Viral vs Unarmored, Corrosive/Viral vs Infested General ' 2-Form: This is a full B&B build of Viral + Hunter Munitions, adding two polarities V. It gets a ' 3 boost from a decent Riven, but not in an innovative way. This construction does quite respectable shot damage, and can kill most of the weaker enemies in one or two shots, depending on crits. In addition, the Latron Prime boasts an exceptionally high zoom for a rifle. However, there is a weapon that does not work well in Warframe, since it does nothing particularly well, and it is eclipsed in all categories by a series of other weapons. One or two Shape polarities for V also ©m would open much more build p. The retreat is exacerbated by its exceptionally high zoom. Even without the HM, the Viral construction does good damage to both types of heavy Grineer, and easily punches through ©s of anything other than an armored corpus. It does not fire fast enough for the corrosive armor strip to be especially good, and cannot process Slash reliably without HM. Rivens The Latron (Prime) has a reasonable but not exceptional disposition of 3/5 (1.07). Personally, I would consider Reload Speed a valuable positive, as I find the refills of LatronP to be very frequent and quite slow. Moreover, with 90% Puncture damage, he cannot use his status chance to reliably process Slash. When it comes to comparing against Burst and Select-Fire rifles, the Latron Prime comes to stay for three. Recommended p: see above. Vs Unshielded Weights: 4/5 - With good DPS explosion for a rifle, the LatronP 'P is quite readable to take down some high-altitude enemies. Statistics With the U22.12 Balance Pass, Latron Prime stats are highly respectable for damage by shooting. LatronP has a Reload etsE etsE :atonN .sopurg artnoc laicnetop ues siam adnia mehini euq EoÄ uo hguorht hcnuP ed sotani sotiefe ed alaf amu e .05,1 ed axiab etnatsab To be used only to report messages from spam, propaganda and problematic messages (assistance, fight or lack of education). There are many semi-out rifles (Grinlok, Latron, Veldt family), however, they also face the concurrence of similar accuracy rifles such as sybaris and tiberon families as well as sniper rifles. Use and Combat Summary The Latron Prime is a DMR type weapon in a game where the DMRs are not really necessary, or in fact particularly powerful or notacious. - Infested / Corpus Damage are both reasonable negatives, since most of these enemies are substantially weaker than Grierier / Corrupted weights, and a decent riven Rolo will still increase damage substantially. Punch Through is also a very useful state that would help significantly against crowds. With Point Strike, the Latron Prime reaches only 55% chance of Crit, leaving a significant chance that any shot did not crit at all. However, treats worse groups than Veldt's higher capacity. However, it is currently vaulted, so it can not be found in the reliabilities currently available. Viral is my preference by Latron Prime. VS Armored Heavies with Hunter Munitions: 4/5 - Sölld CRIST statisticians make HM very strong hit LATP, although a higher critter chance would have been much appreciated by the consistence and frequency of the Slash process. Switch to corrosive puts much more direct damage against infested, although I feel that the roof is still too low for a good construct of armor strip. - Zoom is a particularly desirable negative in LATP, due to your native zoom above the mother's mother. Using the same polarities, it fits into a complete corrosive damage construct, which again can be switched to your preference elements. - The recoil can also be worth a try, as it has very high vertical retreat. Ä € measured The semi-import futs, the Latron Prime is by far the most powerful, and with Hunter Munitions, deals with armored enemies very well. Unless you are a DMR-aficionado, you will probably just leveling at 30, then moving on to something else. Instead, let's focus on Mr.7 Latron Wraith. If you do not struggle with the retreat, the stabilizer may be worth trying, replacing the fragment/watchdog tiles. This compilation will do good against the trainer and corrupted, and will probably still compare decently against most corpus and infested. As usual, vigilant armaments can be exchanged for multiple other mode p. Personally, even before the balance, I preferred Prime's biggest damage damage. Moreover, with a disposition of 3/5, it is quite easy to compensate with a single mod 60/60. Vs variants like an MR.O weapon with terr stats, the latron base is not worth comparing. With a relatively poor ratio of recharging, the Quick Arms can also be worth using if you don't have a small capacity for replenishment. With low bar and a low ROF, and the current status system, the chance of Latp status really wasted. Although potentially useful in plans, and the ' 3 ORB Vallis, most of Warframe's content is relatively ' 3 quarters, where the high zoom is even worse to use. Using a 60/60 in place of one of the 90% elementals would give you a little more space to fit into something else, like the Quick Ones. If you're not going to the high damage by shooting, all the snipers are far superior. They can often also handle the heavy ää s. Builds 0-Shape: This is the construction I would recommend for 0-SHAPE. - Ammo Max Is usually ' 3, because it is quite efficient. If this, especially, you, color delay or arg scope can be used to reduce the chance of any particular shot being a dud. Recommended p: Viral + HM vs Greener, Corrupted, Radiation + VA / Toxin vs Corpus Shielded, Viral + VA / Electric vs Unarmoured Corpus, Corrosive / Viral + or heat) vs infested my builds: my builds are nothing special, i'm' 3 has the problem of fitting both one and Primed Shred in. He is decently powerful, and is one of the best non-Snipers semi-self out there. - Drilling would make LATP capable of processing corrosive and / or slash much more often, but you would lose many direct damages too. Against crowds, especially without punch through, it fights a bit, often demanding long loads in the middle of the fight. This construct decreases the element of 90% to 60/60, which allows the use of Shred. This again goes to the extreme with viral damage and chance of proc., With Shred for group murder. The sniper rifles, although they are worse against groups, they cause much, much more damage than the Latron Prime. Cousin.
