It is a common chorus between parents of small children and the Terribles Two don't have anything at three. When we reach the three years, we start calling them "treenager", a diamond tip for their increasingly discontented indols. But that word isn't even close enough to describe what it means to have a three-year-old in the house every day. They can't communicate as they want, and that pisses them off. They constantly try to do things that could kill them and you stop them from death and that really pisses them off. But today I'm not here to tell you how incredibly difficult the three-year-olds are. If you gave birth to one, you already know (and if you didn't, you'll think I'm exaggerating anyway). Instead, I am here to tell you that the age of three is not the worst age, it is actually the best. And now I will defend this position. They grow and grow so much that yearIn the year between the third and fourth birthday. childrenand grow grow Suddenly, they have hundreds of words in their vocabulary (instead of tens), they speak in short sentences and answer simple questions. They begin to name colors, understand the difference between morning, afternoon and evening, they can also count a little. They begin to help wear their clothes, drive a tricycle, and kick, throw and take a ball. They can climb the stairs with alternating feet! Honestly, the list of milestones of development is impressive and with all this growth, there is no wonder they have a bit of chips on the shoulder from time to time. You would also do that if your brain continually learned new words and master new motor skills every day. It's exhausting to be three. We've written a lot about children's whims over the years. And the odds are, we will continue to write. ... Read moreTreenagers prepare you for all other agesEvery age has its ups and downs, its rewarding moments and its challenges. But no one has the age of three, which exists to prepare you and build your patience for all ages. Of course, now that they're older, they have the right to respond or are not doing their homework or their eyes are constantly glued to the screen of their smartphone. But in fact, this is nothing compared to (many) times (e) where you had to pull them out of a restaurant/shop/friend like a football while screaming and banging for an illogical reason or for the other. If you've successfully passed the three years with just a normal amount of screams and parental crisis, you're ready to face anything else that can lead to being a parent. This is the year for which you will end up distressing, risking to look like the old lady of the supermarket, whose mission is to recommend to young parents of "tear" the younger years, because they grow too quickly, always without noticing the disordered or fragile aspect of parents. About that. One day you'll regret three years. Age 3 is the last year in which they seem very little. When they turn four years, with their fully formed phrases, slightly more intact reasoning skills and pre-K classes, they lost many of their childhood qualities. As you get away from the whims and start forgetting how hard it was to go somewhere or do something at the right time, you will only be left with photos where they look so small and precious and videos of all their adorable pronunciation errors. And even if it seemed impossible at the time, you'll want that, only once again, I could prove how happy they were to "help you" to fold the towels. Or how they wanted me to take them anywhere, despite being perfectly capable of walking. Or they tried so hard to close their jacket by themselves. It will be, one day, as if they grew up too quickly. Meet parents moreof the Earth! Join our group of parents on Facebook. group. group.
