Some are missing, it doesn't make a good job properly ... very bad for me, I only saying the truth .. they give worst wifi pocket app. 1 Ã, I can't access, it continues to tell me that your login in another device, while its new router is b310AS-938 edit: after the update I still have the same problem "Impossible check in.please check If the account is connected to another device, or try again after turning off and turned on the device again "I checked all devices and no one have a HILINK app, unless the globe at home counts app edit: its state 3 Months, when this problem will be solved!? Are you sleeping people? 1 to after 12 days, it is required to connect to Wi-Fi. I took it to g3, where I bought it, sim different, but it doesn't connect to the network! Customer service can solve the problem and my contract is running while I am desperately searching for a Wi-Fi connection! 5 A, I have no idea that this application really exists. It is really convenient and easy to use, I can monitor my use of data in one touch, without entering my modem portal to check the modem status by checking the battery, the use of data, messaging, configurations, etc. Congratulations to the developer Him! 5 A great if you use a mobile wifi. I used to replace my sim for my phone at any time I want to top up but now with this application I can send ussd (s) very simple and fast I recommend it to everyone this reading this. I can also receive and send SMS thanks 5 Ã ¢ The application is good, I like it. Easy to use. However, I seem to update the last update. It is said that there is an update available, but when I want to do the update then the wobile data is turned on again. If mobile data is deactivated, then we have only an option for connection device is through the web. Please look in this problem. 1 A, the same problem as the others, I can't even log in. I'm using passwords I usually use, the default device password, and the correct password I'm using now. But it always says incorrect password. 5 To this is a great app. Excellent for me. If you reset the modem only to be aware of the fact that I connected to know what to do to select the original settings or the modem will not work. Proceed with caution. 1 a scary. Despite the fact that I connected to the network, this terrible application thinks that my device is not. So he wants to connect to a network I'm already connected. I tried to restore the MIFI device, uninstall Ing and reinstall the app, nothing works. 4 A, I use this application to access my mine Wifi. It is more convenient and without problems. The only problem I am having at this time is that you get full mailbox even if I have only had 6 messages on the mailbox. 4 Å, I consider this 4-star application is really good at monitoring my wifi but the option is not enough that I want to know the use of furniture that connect to wi-fi so you can limit it and can check Like many use he / she / it used 5 stars if this option will add I am confident for this DDD Å ¢ âºĀ Â, 5 à ¢ and 'great application. But one thing is missing ie information about the quantity of exact data is not available, instead we need to set manually it's bad, a feature is added that allows us to know about the volume of exact data without managing manually 1 Å ¢ After downloading and installing, you continue to say to connect wifi internet. It was connected to me, even before installing the application, why in the h? He again asked me to connect where I was already connected. However I tried to forget WiFi and try again, same result.
