Patterns of evolution and selection worksheet answers

Warning: Can only detect less than 5000 charactersDifferences from island. Moreover, everyone seemed to look like, but differ from, the common finch on the land of Ecuador, 600 miles to the east. Patterns in the distribution and resemblance of organisms have had an important influence of Darwin's thought. The image at the top of this page is of Darwin your own Warning: Can only detect less than 5000 characters Warning: Can only detect less than 5000 charactersAgain that the variation in a stretch is the critical raw material for evolution. How will frequency distribution in the next generation be? Figures 5A-C irst of all, the proportion of individuals with each value of the stretch (beak sizes or body weight) could be exactly the same. Secondly, thene may be a directional change in one direction. Third (and with this rarrity that its existence is questionable), there may be a simultaneous change in both directions (for example bigger Plan Baller Plan
