If you're looking for a way to run NetBench, the industry-standard networking benchmark, in a smaller environment (and you almost have to since NetBench's infrastructure requirements are so substantial), here's a solution. This site lets you emulate the NetBench test; it uses the client.txt load description file of a real NetBench run to produce the same load on a set of substitute tests that you can download here. The NetBench emulators comprise dbench, tbench, and smbtorture. Dbench measures file system load with I/O calls, tbench tests networking calls with TCP and process load, and smbtorture measures the stress load of your net. (If your browser forces an "http://" header into your address line, click here. Instructables is a community for people who like to make things. When you visit a website online that typically offers some sort of product or service, you may notice a "Beta" label next to the logo or somewhere else on this site. You may already have full access to everything or you may not, depending on the type of beta test being carried out. For those who aren't familiar with product launching or software development, this whole "beta" thing can seem a bit confusing. Here's what you need to know about websites that are in beta. A beta test is a limited release of a product or service with the goal of finding bugs before the final release. Software testing is often referred to by the terms "alpha" and "beta." Generally speaking, the alpha test is an internal test to find bugs, and the beta test is an external test. During the alpha phase, the product is usually opened up to employees of the company and, sometimes, friends and family. During the beta phase, the product is opened up to a limited number of users. Sometimes, beta tests are referred to as "open" or "closed." A closed beta test has a limited number of spots open for testing, while an open beta has either an unlimited number of spots (i.e. anyone who wants to can participate) or a very large number of spots in cases where opening it up to everyone is impractical. If you get invited or make it into the beta test of a site or service that's open to the general public, you'll be one of the lucky few to try the new site or service and all of its feature offerings first before anyone else. You'll also be able to provide the creators with feedback and suggestions for how to make it better. The major downside to using a site or service that's currently in beta is that it may not be very stable. After all, the point of a beta test is to get users to identify hidden bugs or glitches that only become obvious once the site or service is actually being used. Usually, there are no specific qualifications or requirements needed from beta testers. All you need to do is start using the site or service. Apple has its own Beta Software Program so that users can test out the company's next iOS or OS X releases. You can sign up with your Apple ID and enroll your Mac or iOS device in the program. When you become an Apple beta tester, the operating system you'll be testing will come with a built-in feedback feature you can use to report bugs. If you want to find out about other cool, new sites and services that are currently open to beta testing, go and have a look at BetaList. This is a place where startup founders can list their sites or services to attract the best testers like you. It's free to sign up, and you can browse through a few categories that you're interested in checking out. Thanks for letting us know! Tell us why! Understanding Ticket to Work: How to Help Your Clients and the People You Serve Wednesday, August 25, 2021 3 – 4:30 p.m. ET Join us on August 25 for our next Work Incentive Seminar Event (WISE) webinar! This month, we're presenting information specifically for individuals and organizations that serve people who receive Social Security disability benefits (SSDI/SSI) and want to work. We'll share information about the Ticket to Work (Ticket) Program and how the Ticket Program can help your clients on the path to financial independence through employment. The webinar will answer questions like: What is the Ticket Program? How can my organization connect with a Ticket Program service provider or connect the people I work with to relevant supports and services? How can my organization help raise awareness about the Ticket Program in my community? If you're someone who receives SSDI or SSI and you are interested in learning about how the Ticket Program can help you, we encourage you to contact the Ticket to Work Help Line at 1-866-968-7842 or 1-866-833-2967 (TTY) Monday through Friday from 8 a.m. to 8 p.m. ET. Join us next month as we return to our beneficiary webinars. Or check out our WISE webinar archives. Register now Online: choosework.ssa.gov/wise By Phone: 1-866-968-7842 or 1-866-833-2967 (TTY) You will receive a registration confirmation message with instructions on how to log in to the webinar. Please be sure to check your spam folder. WISE in American Sign Language (ASL) Our ASL Guide can help individuals who are deaf or hard of hearing access our monthly WISE webinars using Video Relay Service. Additional accessibility information is available on the registration page. Questions about Ticket to Work? The Ticket Program supports career development for people ages 18 through 64 who receive Social Security disability benefits (SSDI/SSI) and want to work. Monthly WISE webinars provide information about Social Security programs, Work Incentives and other resources that may help you, or someone you know, succeed on the path to financial independence through work. Email us: support@choosework.ssa.gov Call us: 1-866-968-7842 or 1-866-833-2967 (TTY) Visit our website: choosework.ssa.gov Use our Share button to send this information to your colleagues!
